Notes

¹ Population data as of July 1 of each year from the U.S. Department of Commerce, Bureau of the Census.

² Missouri Personal Income and Gross Domestic Product data from the U.S. Department of Commerce, Bureau of Economic Analysis.

³ There is a discontinuity in the GDP by state time series at 1997, where the data change from SIC industry definitions to NAICS industry definitions. This discontinuity results from many sources, including differences in source data and different estimation methodologies. In addition, the NAICS-based GDP by state estimates are consistent with U.S. gross domestic product (GDP) while the SIC-based GDP by state estimates are consistent with U.S. gross domestic income (GDI). This data discontinuity may affect both the levels and the growth rates of the GDP by state estimates. Users of the GDP by state estimates are strongly cautioned against appending the two data series in an attempt to construct a single time series of GDP by state estimates for 1965 to 2006.

⁴ Consumer Price Index (1982-1984=100) data from the U.S. Department of Labor, Bureau of Labor Statistics.

⁵ n/a = not available.
